\*

Run on: MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm Mon Aug 21 10:25:56 2000;

Tabular output not generated. MasPar time 15.34 Seconds 880.732 Million cell updates/sec

Description: Perfect Score: >US-09-240-675-2 (1-436) from US09240675.pep 3178

Sequence: 1 MMVVLLGATTLVLVAVGPWV.....KSSVFSDAVCEKTKPGNTSK 436

Scoring table: PAM 150 Gap 11

Searched:

85661 seqs, 30989116 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot38 1:swissprot

Database:

Statistics: Mean 49.458; Variance 79.633; scale 0.621

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"The structure of the gene for the second chain of the human interferon gamma receptor.";

J. Biol. Chem. '27:12849-728952(1996),

I. FUNCTION: PART OF THE RECEPTOR FOR INTERFERON GAMMA. REQUIRED FOR SIGNAL TRANSDUCTION. THIS ACCESSORY FACTOR IS AN INTEGRAL PART OF THE IFN GAMMA SIGNAL TRANSDUCTION PATHWAY AND IS LIKELY TO INTERACT WITH GAF, JAKI, AND/OR JAKZ.

INTERACT WITH GAF, JAKI, AND/OR JAKZ.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

-I- SUBUNIT: MAY FORM DIMERS OR OLIGOMERS. REQUIRES AN UNIDENT SUBUNIT TO GENERATE A HIGH AFFINITY IL-12R COMPLEX.
-I- SUBCELLULAR LOCATION: TYPE I MEMERANE PROTEIN.
-I- ALTERNATIVE PRODUCTS: ALTERNATIVE SPLICING MAY GIVE RISE TECOND PROTEIN 2 AMINO ACIDS SHORTER.
-I- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
-I- SIMILARITY: CONTAINS 5 FIBRONECTIN TYPE III-LIKE DOMAINS.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm Run on:

Mon Aug 21 10:26:31 2000; MasPar time 35.95 Seconds
840.922 Million cell updates/sec

Tabular output not generated.

Title: >US-09-240-675-2
Description: (1-436) from US09240675.pep
Perfect Score: 3178
Sequence: 1 MMVVLLGATTLVLVAVGPWV......KSSVFSDAVCEKTKPGNTSK 436

Scoring table: PAM 150
Gap 11

Searched: 225878 seqs, 69334122 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: sptremb112

1:sp\_archea 2:sp\_bacteria 3:sp\_fungi 4:sp\_human 5:sp\_invertebrate 6:sp\_mammal 7:sp\_mhc 8:sp\_organelle 9:sp\_phage 10:sp\_plant 11:sp\_rodent 12:sp\_unclassified 13:sp\_vertebrate 14:sp\_virus

Statistics: Mean 48.339; Variance 79.116; scale 0.611

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The transmembrane and cytoplasmic domains of the native IFN receptor have been deleted to obtain a soluble, circulating form of the receptor. Potentially immunogenic epitopes have thus been eliminated. Derivatives obtained by substitution or deletion of this sequence are also claimed as are hybrid molecules comprising the soluble
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptor

The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the new transmembrane and cytoplasmic domains
                                                                                                                                                                                                             rejection.

This recombinant human alpha interferon (IFN) receptor protein is recombinant human alpha interferon (IFN) receptor protein is consist of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when required, this protein can be used for blocking the receptor when required, calso useful for eg drug targetting. Variants of the protein, also useful for eg drug targetting. Variants of the protein, baving residues 149 and 480, are also useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş

                                                                      Monoclonal antibodies produced against soluble forms of the human interferon alpha-beta receptor based on the full-length human IFN-R seguence are claimed. The antibodies are useful for treatment and prophylaxis of disorders involving cell proliferation and/or viral infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diseases and transplant rejection
Claim 3; Fig 2; 58pp; English.
DNA encoding the water-soluble polypeptide with a high affinity for INN-alpha and -beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (Q30533), was incubated with oligos Q30536 and Q30535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the coxic side-effects of known immunosuppressants such as steroids. Sequence 557 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence of a soulble form of the interferon (IFN) receptor with a high affinity for IFN-alpha and beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Water soluble polypeptide(s) strongly bind interferon( and beta - useful as immunosuppressants, for treating
